

Rheumacide
GETS AT THE JOINTS FROM THE INSIDE
CURES TO STAY CURED.

NOT the temporary improvement resulting from dangerous mercury, opiates, alcohol, or potash; not the momentary relief from sharp pain given by liniments; but a searching cleansing of the blood that clears the system of every vestige of the disease, and absolutely cures rheumatism.

CURED AFTER ALL OTHERS FAILED.

ROAD AND FARM IMPROVEMENT

A GOOD END POST.

Those of the Figure 4 Style Good When Constructed Properly—A Practical Experience.

In a recent Ohio Farmer, one of the readers advises others against the figure-4 style of end-post brace for fence. I have on my farm, says Chancy Avery, 14 end posts of this type, all giving as good service as I think it possible to get from any wood post; some of them have been set for six tightening, and the true rods have never failed, and I am confident that with the right principle of construction, carefully executed, this style of bracing will be found the best. Thorough work is essential to success with any style of bracing. Too short braces lift too much on the end post, and

All farm vegetables begin to show deterioration in a few weeks from being stored. The cabbages and beets wilt and the potatoes shrivel and send out sprouts, which have to be broken off again and again to prevent the nourishment and moisture in the potato being drawn into the sprout. It is evident that the man with a furnace will have to arrange his cellar in some other way than by leaving it open space.

Recently a professor in one of our agricultural colleges was describing to the writer a most admirable cold storage room in his cellar. He has a furnace, and, as is common, the furnace must have a supply of cold air. He has had a brick partition built across one end of his cellar, and the cold air for the furnace is drawn through this room. It has one aperture opening to the outside, while on the inside the air goes into the cold air pipe of the furnace.

There is a window in the cold storage room, and of course a door admits from that into the other part of the cellar. On cool days, when the temperature is not so low as to freeze the vegetables, the professor opens the window wide and fills the vegetable cellar with cold air, and then closes it enough to admit of only the amount of draft necessary to keep the furnace going.

The results are found to be admirable, and all vegetables stored there, as well as the apples, are kept in a perfect state of preservation till used.

ALL-AROUND FARM GATE.

This Tells How One May Be Built Which Will Do Away with All Sagging.

When a gate is of considerable length, as farm gates must be to let a wagon pass through, there is always danger that they will sag, and mainly because the device used for the latch is faulty. Try the following plan of constructing a latch and see if it does not work well, says the Indianapolis News. Have the blacksmith bend a piece of half-inch round iron in L shape, making one arm one-quarter of an inch longer than the thickness of the post and the gate-board; the other

PRESERVING FENCE POSTS.

They May Be Made to Last Much Longer If They Are Dipped in Tar Before Being Set.

There are several methods whereby fence posts may be made to last much longer than if set untreated. An application of coal tar mixed with 1-10 oil of turpentine and applied hot is one of the best preservatives. To do this, have an ordinary large iron kettle, in which to heat and mix the tar, and a deep vat, which may be an old wash boiler or similar vessel, which must be at least three feet deep and ten inches in diameter. Have the tar quite hot when the posts are dipped. Allow them to remain a moment, then remove and pile with the ends free and allow to dry.

A mixture of three parts coal tar and one part clean, unsalted grease, to prevent the tar from drying until it has had time to fill the pores of the wood, is also a first-class preservative, says the Farm and Home. One barrel coal tar should cover 300 posts. This may be painted upon the posts, but better be applied in a bath as described above. In either case the posts should not be set deeper than the tar has been applied. An application to the top or exposed part of the post need not be so thorough. Good paint is more valuable for exposed portions.

Posts used in this way should be thoroughly dry and well seasoned before the tar is applied, otherwise when set they will not quite as rapidly as if untreated. Heavy tar oils, such as carbolineum, are expensive than paint-coal tars, but are expensive for general use. Charring posts before setting is not a good practice, because when charred large cracks appear, which are openings for rot.

BITS FOR THINKING FARMERS.

Stop the leaks.

Be a good neighbor.

Good seed—good luck.

Pile up and burn the rubbish.

Does the house or barn need painting?

Are there any tools or implements uncarried for?

Running down a farm don't run up a bank account.

How about the cellar? It needs some attention these days.

Devote your attention to that breed of stock you like best.

"It is never too late to mend"—a broken gate, door or leaky roof—Midland Farmer.

Improving the Farm.

The farm should be well fenced and divided into lots of 50 acres or less for a rotation of crops, says Farm and Home. Sow pease and German clover for a green-fallow to add humus to the soil. All grain, hay and roughage of all kinds should be fed on the farm and sold in the way of pork and beef, therefore adding to the fertility of the land.

Eight Days On His Back

and cured with two applications of Dixie Nerve & Bone Liniment. It will cure you.

Richardson, Virginia.

Gentlemen—I have been using your Nerve & Bone Liniment on my back and find it acts quickly. I have had eight days of bad pain on my back and could not move and after two applications I am now out and to bed.

Very truly yours,

F. C. O'NEILL, North View, Va.

FARMVILLE, VA.

THE VEGETABLE CELLAR.

A Suggestion to Farmers Who Have Furnaces—How One Man Managed.

In the winter is the time the farmer takes to lay his plans for the future. We think that nothing will be better worth his attention this winter than the question of a storage cellar for potatoes, cabbages, squashes and other products of the field. There was a time when the cellar under the farmhouse was cool enough in winter to keep most of the vegetables that it was desired to keep for some months. But little by little the big furnace has invaded the home of the farmer, and, the cellar is no longer the good storage place it was, says Chancy Avery, in the Farmers' Review. The night temperature now runs to 50 degrees and the day temperature to 70 degrees and higher.

All farm vegetables begin to show deterioration in a few weeks from being stored. The cabbages and beets wilt and the potatoes shrivel and send out sprouts, which have to be broken off again and again to prevent the nourishment and moisture in the potato being drawn into the sprout. It is evident that the man with a furnace will have to arrange his cellar in some other way than by leaving it open space.

Backache, "The Blues"

Both Symptoms of Organic Derangement in Women—Thousands of Sufferers Find Relief.

Mrs. J. G. Holmes
Emma Cotrey

Dear Mrs. Pinkham:—I feel very badly and am unable to sleep at night. I have been taking your Compound for backache and it has relieved me greatly. I am now able to sleep well and am feeling much better.

Dear Mrs. Pinkham:—I am a woman who has suffered from backache for many years. I have tried many remedies, but none have been successful. I am now taking your Compound and it is helping me greatly. I am able to sleep well and am feeling much better.
